

Supporting Inclusive Schooling Inclusive Schooling Introduction

"Inclusive Schooling" has evolved from considerable discussion with people with intellectual disability, their families and advocates, as well as with classroom, pre-school and early intervention teachers, integration aides and school and pre-school Support staff, It has also drawn on the wisdom and knowledge of other writers in the area of inclusive schooling,

The booklet very much underpins this series of STAR materials, as it explains the concept of inclusive schooling, especially in relation to students with an intellectual disability, The booklet also suggests some very practical ways people can bring about the successful inclusion of students with intellectual disability in their teaching and learning programs within regular schools, As well, it addresses the more common questions people ask,

We believe "Inclusive Schooling" will help families, pre-school and school communities to better understand the importance and value of including students with intellectual disability in regular schools and pre-school services, while giving them strategies to achieve this.
